

We Repair and Service Many Brands of Large Pumps

In order to meet the growing demand for dependable pump repair, service, and installation, MWI expanded its manufacturing facilities in 1989 to include a Repair and Service Division.

Over 70 Years of experience with large volume water pumps serving a wide range of applications

Field service capabilities

Professional engineers on staff

Full size testing of pumps up to 100,000 GPM

Full machine shop capabilities up to 120" in diameter

Metalizing, sandblasting and specialty coatings

Re-engineering of existing equipment to new specifications

Reverse engineering of existing equipment to new specifications

Troubleshooting

Field testing and curves (developed withing South Florida Water Management standards)

Large Inventory of parts in stock

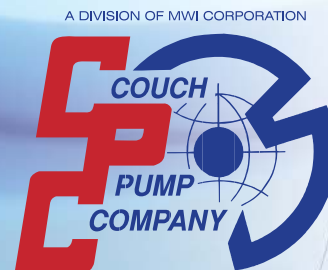

Service and maintenance contracts

... Our Customers

- Agriculture Related Business - Water Management Districts
- The Power Industry - Paper Mills - Wastewater Treatment Plants
- Shrimp Farms/Aquaculture - Municipal Storm Water Stations

In our shop, trained craftsmen utilize the latest in machine shop technology along with incorporating specialty alloys, corrosion resistant steel, coatings and certified welding procedures. A large inventory of standard materials, seals and bearings help to speed up repair, thereby reducing customer downtime. Pumps repaired by MWI are treated with all the precision and care of new equipment. MWI also offers a complete line of field service. Experienced crews, familiar with pumping operations can both remove and reinstall pumps.
